**Notes**

This file provides the list of runs that are protected against Rapid Response Mode triggers during the semester. It includes only VM and A-rank runs. For the Visitor Mode runs, the dates on which

## European Southern Observatory

the relevant runs are scheduled are also reported. RRM triggers received for the given instrument/telescope during the execution of RRM-protected runs **will be rejected**.

In general, time critical Service Mode runs have several possible windows during the semester. RRM-triggers will be rejected only if interfering with an RRM-protected programme being observed at the time of trigger.
